Novo wrote on Thu, 07 July 2022 20:15I'm testing TheIDE on Void Linux (rolling distro), which is using clang version 12.0.1 at this time.

Well, in Windows I am at clang 14, in Linux clang 10 so that is unlikely the issue.

That said, you still have not told me what Ctrl+Space does. Obviously it shows something based on your posts.

Does it show U++ functions e.g.?

Or, opposite, does autocomplete work with std::string? (with proper includes, of course) (in that case there would be a problem with include paths)
