Hello Mirek,

I tested on the latest commit and from my perspective the performance is better, however my feelings are that Assist++ is not super responsive and you can feel that it takes some time to appear. Could you add a release log file that will measure the Assist++ opening time? From request to appear.

For the rest of the issues I have mentioned in my previous message, everything is the same. Here is screenshot from String without AString methods:

The console.`#{Assist++}` doesn't open assist.
