Oblivion wrote on Tue, 19 July 2022 00:12Hello germandiago,

Quote:I do not understand what the macros are about. Not sure if an UppHub would attract many people honestly. It can be good to have and nice in theory, but people go to Conan or Vcpkg for packages to be realistic. However, I am not the one who take this kind of decisions and if it is good for Ultimate++ project I do not have anything against it, it is just my two cents.

What I mean is: We can have a collection of macros that will create build scripts for major build tools such as make, cmake, meson, etc. You (or any maintainer) run the preferred generator once, then deploy the generated build script with your U++ based app, without the need for theide or umk. (We already have this with make, but it is hard-coded ATM.)

So, all in all, it is meant to simplify what you already aim.

Best regards,
Oblivion

Nice! Now I understand, thanks.
