Hi,

Peter, this does not work for me:

 B() : A(array), array({}) { //<-------Initialize here

It still gives uninitialized array in DEBUG mode. But this is expected.

John, your intermediate class or struct is really an interesting idea and it surely can do the trick. However, I really need to fix (simplify) my own code to be able to read and understand it even after years have passed.

Thanks to both of you!

Best regards,

Tom
