
Subject: Font colours in RichTextView?

Hi, question about Font colours in RichTextView using QTF.
The colours I'm seeing are way off the RGB values expected,
even using the (R.G.B) format:

(255.0.0) is light pink (should be bright red)

(0.255.0) is bright green (ok)

(0.0.255) is almost white (should be bright blue)

The single-char colour codes are unusable for me, and don't follow
any colour standard I can see. How can I use real RGB values
in RichTextView?
