Subject: Font colours in RichTextView?

Hi, question about Font colours in RichTextView using QTF. The colours I'm seeing are way off the RGB values expected, even using the (R.G.B) format:

(255.0.0) is light pink (should be bright red) (0.255.0) is bright green (ok) (0.0.255) is almost white (should be bright blue)

The single-char colour codes are unusable for me, and don't follow any colour standard I can see. How can I use real RGB values in RichTextView?
