jjacksonRIAB wrote on Sat, 24 September 2022 09:53Nah, Mirek, I don't feel I'm owed an explanation :d

It was not meant specifically for you...

I felt that general explanation of at least some inner workings will help us fix things.

In your case I remember complaining about headers. Do they work now? (If not, there are some hints in my long post where to look for troubles).

As for old libclang... I can put limit for minimal version, e.g. libclang 10 (I am quite sure that one works), what do you think?
