This is the problem I'm currently trying to work out but not getting anywhere yet:

https://files.catbox.moe/t4kcpd.mp4

It will get stuck in a reparse loop. Same thing also happens occasionally when I'm exiting TheIDE. Note that it happens when I move rapidly to a resource-type file. I didn't capture it in the video but it behaves normally and exits the loop if I go back to a parseable .cpp or .h file, so it's not stuck that way permanently - it is just attempting to redo the same old job repeatedly until it gets a new job. When it happens on exit it becomes permanently stuck.
