Subject: Re: theide with libclang
Posted by Klugier on Tue, 27 Sep 2022 18:35:00 GMT

Hello Lance,

I merged the changes related to display error prompt when libclan has not been detected. In your case it won't help, because your instance of theide has access to this library.

In order to have more reasonable callstack, you can build the newest TheIDE in debug mode with the older one that works on previos Assist++ version. For example to do it you can use TheIDE from the latest release 2022.2.
