Hi Mirek,

No change. It still crashes as before:

```
* /home/tom/out/uppsrc/CLANG.Blitz.Gui.Lclang.Shared/ide 03.10.2022 09:47:54, user: tom
```

```
09:47:54:552 INFO GuiMainFn_(): Version: 16466 (64 bit) (wchar32) (CLANG) (C++14) (Gtk)
```

```
Compiled: 10/03/2022 09:47:14
```

```
***** PANIC: Invalid memory access!
```

Anyway, it's nice to have the --noclang switch for testing.

BTW: I have also clang-14. Could this make any difference compared to your clang-10?

Best regards,

Tom
