[View Forum Message](#) <> [Reply to Message](#)

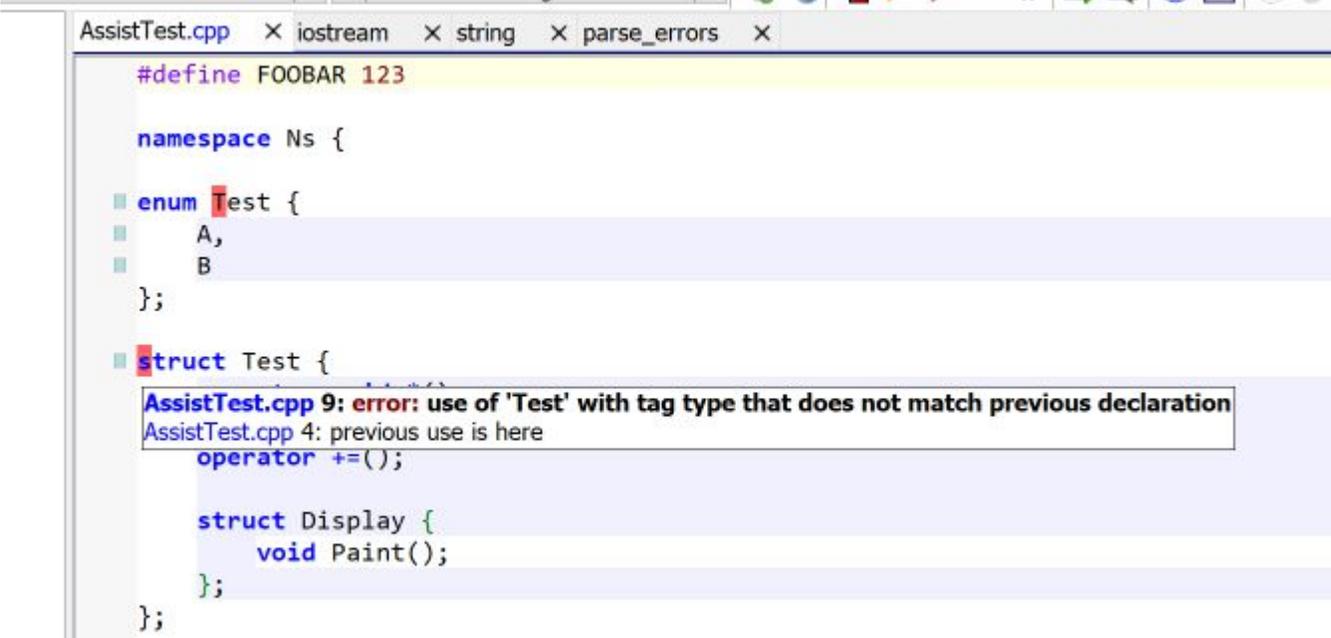

(now showing errors as you type...)

Also I have added Alt+Shift+U - similar to Alt+U (show all references), but shows all references for symbol at cursor instead of current function.

The screenshot shows a code editor with several tabs: AssistTest.cpp, iostream, string, and parse_errors. The code in AssistTest.cpp is as follows:

```
#define FOOBAR 123

namespace Ns {

enum Test {
    A,
    B
};

struct Test {
    operator +=();

    struct Display {
        void Paint();
    };
};
```

An error message is displayed over the second struct declaration:

```
AssistTest.cpp 9: error: use of 'Test' with tag type that does not match previous declaration
AssistTest.cpp 4: previous use is here
```
