Hi,

There is missing library configuration for mac in PostgreSQL package. Right click on the PostgreSQL package -> Package organizer and set the missing link configuration for mac.

But there are other issues with PostgreSQL when you are using PostgresQLSchema

- wrong definition of BOOL(x), BOOL_ARRAY(x, items), BOOL(x)_, BOOL_ARRAY(x, items)_ => "char(1)" should be "boolean"
- wrong definition of REFERENCES_(n, x) and REFERENCES CASCADE_(n, x)

see the PostgreSQL: Update schema

BR, Radek
