Another problem. Add new help topic will crash TheIDE. For a test,
* open "examples/AddressBook", navigate to "AddressBook.cpp" if not already in it.
* In the class "AddressBook", click any member variable or function to add cocumentation [a cyan square to the left of the function/variable line];
* in the popup menu, choose "New reference topic"
* in the "New Topic" dialog, in the Template field, change it to "Reference-en_us (in uppsrc)"
* Click "OK" button

This part should be now fixed in master.
