Here we go:

https://sourceforge.net/projects/upp/files/upp/2022.3rc1/

Release highlights

Homegrown C++ parser in theide is replaced with libclang resulting in new and improved Assist++ features
Optimised memory consumption of U++ widgets.

MacOS version is not released with 2022.3. We hope to provide it again with the 2023.1.

TheIDE:

Autocomplete now correctly works in most cases (except in template bodies, which is libclang limitation)
Code navigator refactored and improved

TheIDE now shows C++ errors while editing sources

TheIDE now shows information tips about program symbols when you leave mouse over it (documentation if available, declaration signature if not)

New function "Usage" shows all usages of current symbol through all project sources based on C++ analysis. With virtual methods, it shows all overrides of base class method.

CtrlCore, CtrlLib:

Memory consumption (esp. sizeof) of widgets greatly reduced (by up to 70%).
LabelBox now allows center and right alignment.
