Hi,

While testing the current version, I have found a weird bug:  
Character 0x1F in QTF string (inside \1 ... \1) causes the program termination.  
This code does not work:

```
#include <CtrlLib/CtrlLib.h>

using namespace Upp;

GUI_APP_MAIN {
    ErrorOK("\1Text \x1f text\1");
}
```

OS: Ubuntu 20.04

Best regards,  
Victor
