Hi,

While testing the current version, I have found a weird bug:

Character 0x1F in QTF string (inside \1 ... \1) causes the program termination.

This code does not work:

```
#include <CtrlLib/CtrlLib.h>
```

```
using namespace Upp;
```

```
GUI_APP_MAIN {  
    ErrorOK("\1Text \x1f text\1");  
}
```

OS: Ubuntu 20.04

Best regards,
Victor
