Hi,

Just checked, and Windows is working fine with Dark theme. However, selecting IDE settings GUI theme = Dark, results in very dark console text on pretty black paper in Linux. (At least on my Linux Mint 21.1.) When GUI theme = Host platform in Linux, and the host platform theme is dark, the console looks good.

Best regards,

Tom

EDIT: BTW, in Windows 11 the Dark theme (host platform) drop down menu item texts now appear with black text and gray selection bar, which is hard to read. The white text and gray selection bar in the previous release was better. However, the light theme is now better than in the previous release (2022.2) on Windows 11, since the contrast of menu text and selection bar is better.
