Hello,

In addition to the topic related to Chat GPT3, I also tried DALL-e from OpenAI. It is an image generator from string provided by user. The images are generated by trained AI model.

After several attempts I manage to force this tool to generate alternative U++ logo. Image below:

The image was generated by providing following string into the system 'Big orange latter U next to plus and plus'. I needed several to dozens trials to make AI design something that is usable. This generation almost empty my free trial credits (50 for signing up and 15 free credits granted per month).
