Hello,

The most impressive part is that Chat GPT is aware about U++ :) I asked the bot what is better U++ or QT and he can not indicate clear winner ;) But, he is definitely aware of bot technologies. I have a doubts about code the bot provided, many times it doesn't compile. For example I wanted from him to create simple gui application with paint. He used OnPaint method with Draw& draw, which is not valid for U++. The same is true for using methods that doesn't belong to draw. It looks like valid U++ code, but it is not.

Backing to the tool it is truly impressive. I fully agree with Oblivion. The way how it communicates with you using natural language is phenomenal. You fell like you are speaking with normal person. Of course you see the limitations, but the communication is super smooth.

I can imagine that the chat will take over the significant web search engines market share. Google even raised the red flag. More information you can read in this article.
