Actually, I built Boost using both mingw and VC so I have two different libs. But the same error is displayed in VC also.

Linking...

LINK : fatal error LNK1104: cannot open file 'libboost_filesystem-vc71-sgd-1_33_1.lib'

Hello,

Sorry about my incorrect assumption earlier.

From your linker error, it looks like the linker cannot find the .lib file. Is the file libboost_filesystem-vc71-sgd-1_33_1.lib created? And in which folder is it in? You'll probably need to re-check your libraries path.

Best Regards,
Yeoh
