1st, in my TopWindow derived class's constructor, I add 2 columns:

```
PopUpTable& pt = dlFields.ListObject(); // dlFields ref to DropList
pt.AddColumn("Name");
pt.AddColumn("Type");
```

2nd, when I got the database fields info:

```
dlFields.Clear();
PopUpTable& pt = dlFields.ListObject();
for(auto i = 0; i < vFields.GetCount(); i++) // vFields is a Vector of String contains field names
{
    dlFields.Add(vFields[i]);
}
for(int i = 0; i < vFieldsType.GetCount(); i++) // vFieldsType is a Vector of String contains field
type
{
    pt.Set(i, 1, vFieldsType[i]);
}
```

I have to add the first column rows, then set the second column rows, the code works fine. when select a row, the first column's content of selected row is showed.
