```
   FILE* pip = popen("exec bash -c 'echo $PATH'", "r");
   if (!pip)
   {
 LOG("can not open pipe!");
   }

   char lineversion[600];
   memset (lineversion, 0, sizeof(lineversion));
   if (!fgets(lineversion, sizeof(lineversion), pip))
   {
 LOG("fgets error!");
   }

 String path2;
 path2.Cat(lineversion);
 LOG("path2="<< path2);
```

This works. But I wonder if there is a more effective way in upp? Upp way...
