Hi,

While working with thousands of jpeg files, I've found a few, which cause app crash.
One of them is attached.

Here's a simple testcase:

Test.upp:

```
description "Test\377";
```

```
uses
```

```
Core,
```

```
plugin/jpg;
```

```
file
```

```
Test.cpp;
```

```
mainconfig
```

```
" " = " ";
```

Test.cpp:

```
#include <Core/Core.h>
#include <Draw/Draw.h>
```

```
using namespace Upp;
```

```
CONSOLE_APP_MAIN {
    String im = LoadFile("/tmp/test.jpg");
    Image img = StreamRaster::LoadStringAny(im); // Segmentation fault (core dumped)
    Cout() << "OK\n";
}
```

The IDE: 16666

OS: Ubuntu 20.04

Best regards,

Victor
