---

code first:

case 1:

```
r = pcList.GetRect(); // pcList is a ParentCtrl  
sz = pcList.GetSize(); // sz = {316, 167}  
aclItemList.HSizePosZ().VSizePos(); // aclItemList is an ArrayCtrl  
aclItemList.AddColumn("item");  
aclItemList.AddColumn("time");  
pcList.Add(aclItemList);  
r = aclItemList.GetRect(); // r = {0, 0, 316, 167}
```

case 2:

```
r = pcList.GetRect(); // pcList is a ParentCtrl  
sz = pcList.GetSize(); // sz = {316, 167}  
aclItemList.HSizePosZ().TopPos(0, sz.cy); // aclItemList is an ArrayCtrl, only difference is here,  
vertical layout method  
aclItemList.AddColumn("item");  
aclItemList.AddColumn("time");  
pcList.Add(aclItemList);  
r = aclItemList.GetRect(); // r = {0, 0, 316, 167}
```

in both cases, r and sz are same, but in case2, there is a strang gap.
