Hi,

Thelide/Linter (Cppcheck) has made some more progress.

- + CppCheck library files support is enabled.
- + CppCheck plugins support is enabled.
- + Additional command line options can now be passed manually, via setup dialog. (If needed)
- + U++ X11 (NOGTK) backend crash fixed on linux.

Note that, cppcheck library files (configurable checkers) are a powerful and nice way to allow cppcheck to recognize external libraries' (U++, GTK, QT, etc.) stuff (functions, etc.) Now it is enabled. ide/Linter will now check for .cfg files under a user-configurable path.

Similarly, 3rd party plugins for cppcheck can now be enabled.

Best regards,
