Hello. I make notepad for Google Text-to-Speech service.
It's text editor for translation text to voice.

My problems:

1) Windows 7. #define WIN32 not set for MSVS19 and MSVS22. Debug and Release.

#ifdef WIN32
 111!!!; <--- No error
#endif
Only clang show error.

2) How to get signal for TopWindow about maximized/restored window action?
I'm save this information to configure file and restore windows parameters on next run.

3) How to create multiline text editor? EditField is oneline.
Hmm. I see, DocEdit more better. How about left-side information and icons row?

4) How create list of opened files?
Horizontal list. Like in TheIde.

5) How to get command line arguments?
cmd.exe file_to_open
