After some tries I find out that there is some incompatibility between clang and visual studio.

In fact the problem arises only in machine where it is installed VC++.

It seems a known problem: <https://developercommunity.visualstudio.com/t/intellisense-and-highlighting-are-not-working-with/1284489>

But I don't find the solution for theide.

I suppose there is no interest for this particular issue....

Thanks for reading
