Fixed the problem for my self added SetFocus() to the code after the execute

```
void ArrayCtrl::RightDown(Point p, dword flags) {
    if((flags & (K_CTRL | K_SHIFT)) == 0) {
        if(cursor >= 0 && !multiselect) {
            ClearSelection();
        }
        DoPoint(p, false);
        ClickColumn(p);
        if(cursor >= 0 && multiselect) {
            if(!IsSelected(cursor)) {
                ClearSelection();
                SelectOne(anchor = cursor);
            }
            Action();
        }
    }
    MenuBar::Execute(WhenBar);
    SetFocus();
}
```
