Hi Mirek,

There is also a small problem with configurable keys.

CtrlLib/AKeys.cpp:255

```
if(p.IsNumber()) {  
    uint32 q = p.ReadNumber(16); // <- The number key combinations (e.g. CTRL+SHIFT+1) can't  
    be used, apparently due to the number base (16).  
    if(q <= 9)  
        return f | (K_0 + q);  
    return f | q;  
}
```

Edit:

This is what I get in reference/AK (log)

```
s = - "Setup";  
ENGLISH          Ctrl+1;  
CZECH            Ctrl+3;  
KEYS             Ctrl+4;  
  
- "AK";  
  
FN2              Ctrl+W;  
EXIT             Ctrl+D;
```

```
p.PeekChar() = 1  
q = 20  
p.PeekChar() = 4  
q = 68
```

Best regards,  
Oblivion
