Hi,

I built an application to backup files and in one routine I use the ShellOpenFolder function from the ComDlg.cpp file in the ide/common package. (the Util.cpp file in question is part of this component)

```
int n = gD.GetCursor();  
String pasta_ = gD.Get ( n,colunaDestino).ToString();  
if(!pasta_.IsEqual("") )  
    ShellOpenFolder(pasta_);
```
