Hi,

Since TerminalCtrl can run smoothly on windows (7, 8, 10+), linux and AFAIK macos, I think it is time to revive Omari's request.

Instead of catering to the needs and requirements of each and every DE's terminal, why not have our own?

TheIDE is already a great DE, but it seriously lacks terminal integration which we find on other serious IDE's.

TerminalCtrl is a battle-tested beast at this point and TheIDE can gain more functionality with its integration.

Any ideas, or comments?

Best regards,
Oblivion
