Subject: error / memory leak in HttpServer example
Posted by BetoValle on Mon, 12 Jun 2023 15:29:32 GMT

Hi,

  After i run the HttpServer example (reference Assembly) and when I close the window the application show 20 lines of memory leak!

  If i put Server.Close() in line 30 (HttpServer) it displays error Assertion failed in (...\Core\Socket.cpp, line 382)
 ls.IsOpen()

I don't know if there was carelessness in the example when shutting down the server or if this should be corrected!

Thanks!
