Subject: Feature request: Copy and paste layouts

Hi!
While playing around with the layout designer I could get Tabs to work! Thanks to Address Book example!
But, I find that a possibility to copy and paste layouts are needed.
Example: You design a layout. Now you want another layout to be the same size with the same controls in it, but making a few changes. Instead of redesigning the second layout, you could just copy and paste the other layout, give this new copy a name and edit it.
Please think about it!
