When using "Show git history for file..." for "plugin/tif/tifupp.cpp" and comparing the previous and current version, very large region of code seems to be changed at the first glance. However, in reality, the comparison function does not match the lines very well and there are just few changes to display. Please take a look.

Best regards,

Tom

There is a change in indentation. Should we ignore it? (That is not rethrical question, I really wonder whether we should... it is doable)

Mirek

Hi,

Yes, I see there are several indentation changes, but the real issue begins on line 904 "break;", where it completely loses sync. Then it re-synchronizes to "break;" on line 1001, within another switch. Do you get this same behavior?

I do not mind seeing the indentation changes, especially as they are so neatly presented inline. It is actually good to see why a file was updated, even if it just indentation. But the large portions of code (such as 904...) getting out of sync is a problem.

Best regards,

Tom
