yeohhs wrote on Sat, 28 October 2006 09:21 This is a U++ program (version 0.0.1 alpha) released for testing and comments.

Features implemented

1. Splash screen
2. About dialog
3. Menu and popup menu
4. Toolbar
5. Status bar
6. Options dialog
7. Help (using Topic++)
8. Editors dialog (only shows DocEdit and LineEdit)
9. use of .rc file to embed program icon and version info.

This program is meant as a simple template program which I will use to explore the various aspects of U++.

I'm still new to U++ so I would appreciate any ideas or suggestions on this simple template. I want to get it right so that later I will write an article that explains how this program works.

Thanks in advance
Yeoh

Hi Yeoh,

very nice work! It was helpful for me. I was still unaware of Topic and how to use it. U++ is a continue surprise for me. But now I filled the gap.

Please continue on this line, with very simple interaction among widgets... sorry, controls. When all normal controls are covered perhaps a simple application about sqlite would be greatly appreciated by our forum.

Many thanks,

Luigi
