
Subject: Bugfix: XmlParser in endless loop
Posted by [zsolt](#) on Mon, 02 Oct 2023 16:07:03 GMT

Try this simple code:

```
ParseXML("</b>");
```

This function goes into an endless loop, because at the end of sReadXmlNode() function, the line
p.ReadText(); // skip empty text
doesn't do anything.

My first idea was to change it to
p.Skip(); // skip empty text

It seems to be better, but the error message will not be too useful.

My proposed change:

```
@@ -1005,16 +1005,15 @@ static XmlNode sReadXmlNode(XmlParser& p, ParseXmlFilter
*filter, dword style)
    return m;
}
if(p.IsText()) {
    m.CreateText(p.ReadText());
    m.Shrink();
    return m;
}
- p.ReadText(); // skip empty text
- return m;
+ throw XmlError("Unexpected text");
}

void ParseXmlFilter::EndTag() {}

XmlNode ParseXML(XmlParser& p, dword style, ParseXmlFilter *filter)
{
    XmlNode r;
```
