Necessary in order to detect a redirection.

By the way, can you add also host and port getters ?

```
String    GetPath() const           { return path; }
String    GetHost() const           { return host; }
int       GetPort() const           { return port; }
```
