Hi,

Another round of updates.

Many bugs have been fixed in both Bobcat and TerminalCtrl (Thanks Honza (dolik-rce)!)

Also Finder, the search bar of Bobcat, has received some significant upgrades:

- Finder is now a frame instead of a dialog. This way, each terminal can have its own search bar and settings.
- Three search modes are implemented:
 - 1) Case sensitive search mode.
 - 2) Case insensitive search mode.
 - 3) Regex-based (PCRE) search mode.
- All search modes have the ability to move among the found strings.
- Finder has its own keyboard shortcuts group in the shortcuts manager and each shortcut can be configured by the user.
- And lot more...

A screenshot of Finder, running on regex mode:

Best regards,
Oblivion
