Hello Tom,

There are no step by step instructions in our documentation, but the process is the same as for other repositories. You need to have GitHub account and create your own U++ fork. After that you can create dedicated branch to fix or work on the master. Once you will have everything prepeared on your branch you need to create PR from fork to upp master branch.

Here is GitHub documentation pages you can find useful:
- https://docs.github.com/en/pull-requests/collaborating-with-pull-requests/working-with-forks/fork-a-repo
- https://docs.github.com/en/pull-requests/collaborating-with-pull-requests/proposing-changes-to-your-work-with-pull-requests/creating-a-pull-request-from-a-fork
