Hello,

the default color of labelbox is not visible in darkmode. However if I use

.SetColor(SBlack());

then the box appear.

I wish this is the default color. Otherwise would be nice to have this method in the lay panel.

Luigi

edit: I found

```
LabelBox::LabelBox()
{
 color = Null;
 SetInk(LabelBoxTextColor());
}
```

If I set

color = SBlack();

my problem is solved.
Is this a safe way to proceede?
