NetCDF (Network Common Data Form) is a file format for storing multidimensional scientific data (variables) such as temperature, humidity, pressure, wind speed, and direction. The normal extension of these files is .nc

NetCDF U++ UppHub wrapper is a basic C++ wrapper. The library itself is included in the plugin folder.

NetCDF version included is the last, 4.9.2.

A simple sample of the wrapper and of the library itself is included in examples/NetCDF_demo_cl package.

In addition, a simple file reader is included in examples/NetCDF_reader_cl package.
