This works for quite some time now,
but i postpone this message to see if this code would work for latest versions, and it does.
I guess it was quite some work under the hood, and it maybe works even better than before,
so - thanks!

ADDED:

it seems that if one clicks eg `#include<ctime>` somewhere in the code it works ok, but
if `#include <c:/path/someHeader.hpp>` is there that is not on the compiler/other path - it does not
open it.

Can this be fixed?
