Oh yes.

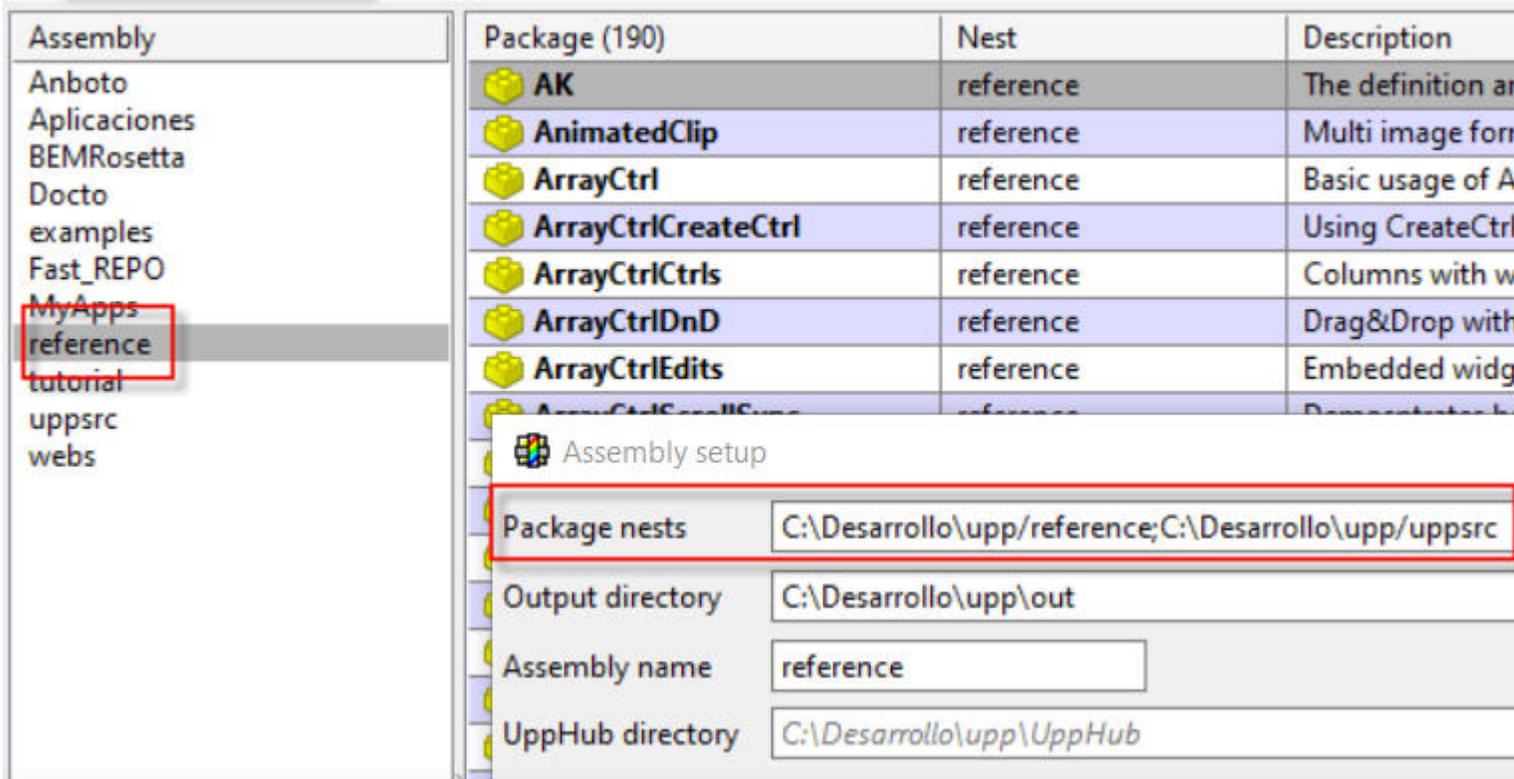

In addition, please remember that for including all includes properly, you should have to set them in Select main package/Assembly setup/Package nests, like in this screenshot:

You can see that, even though 'Reference' is an official package, as 'upp', both have to be set with the full path.

 [Select main package \(TheIDE 17221\)](#)

The screenshot shows the U++ IDE interface. On the left, the 'Assembly' list includes 'MyApps', 'reference', 'tutorial', 'uppsrc', and 'webs'. The 'reference' assembly is selected. The main window displays the 'Package (190)' list with columns for Package, Nest, and Description. Below this, the 'Assembly setup' dialog is open, showing the 'Package nests' field with the value 'C:\Desarrollo\upp/reference;C:\Desarrollo\upp/uppsrc'. Other fields include 'Output directory' (C:\Desarrollo\upp\out), 'Assembly name' (reference), and 'UppHub directory' (C:\Desarrollo\upp\UppHub).

Package (190)	Nest	Description
AK	reference	The definition an
AnimatedClip	reference	Multi image form
ArrayCtrl	reference	Basic usage of A
ArrayCtrlCreateCtrl	reference	Using CreateCtrl
ArrayCtrlCtrls	reference	Columns with w
ArrayCtrlDnD	reference	Drag&Drop with
ArrayCtrlEdits	reference	Embedded widg
ArrayCtrlScrollS...	reference	Demonstrates h

Assembly setup

Package nests	C:\Desarrollo\upp/reference;C:\Desarrollo\upp/uppsrc
Output directory	C:\Desarrollo\upp\out
Assembly name	reference
UppHub directory	C:\Desarrollo\upp\UppHub
