
Subject: Compilation warnings and random crashes

I get a bunch of warnings like below when compiling on MacOS 10.15:

/Users/XXX/dvlp/cpp/code/upp/git/uppsrc/ide/RepoSync.cpp:283:6: note: use non-reference type
'Upp::KeyValueRef<Upp::String, int>'

```
for(const auto& w : ~work) {  
    ^~~~~~
```

Basically, a reference is pointing to a temporary object.

And I'm getting random crashes with TheIDE when launching it on Linux (I'm not using a binary compiled on MacOS :))

I guess, these crashes and references to temporary objects are related.

TIA
