Hi,

I've done some tests with ApplImage, it works, but it's just a simple container. Nothing more.

My quick tutorial is here: <https://www.ultimatepp.org/forums/index.php?t=msg&th=12200&start=0&>

The ApplImage tools don't tell you what libs to pack with your application to make it portable.

So the most tedious task - testing whether your application works on different distributions - still needs to be done somehow.

On ubuntu 24.04 you also need to install libfuse2.
