Hello,

it should be easy but I cannot find the correct way. After grid.WhenLeftClick I do

```
void TournamentTiebreakDlg::SetTB()
{ int row = grid.GetCurrentRow();
  if (row<0) return;
  int col = grid.GetColumn(row).GetNumber();
  Exclamation(AsString(row) + " " + AsString(col));
}
```

but the program does not show the clicked column. What is the right method?

Thanks,

Luigi
