luoganda wrote on Mon, 17 June 2024 10:28Can someone make all Edit...(...,label)
<=labelSize(bottom)
as big as a dialog allows it - so that all space can be used(as multiline)?
I do this manually with all new downloaded versions of upp - and it works,
because that 3lines info can come handy.

Also, i noticed that sometimes EditNumber(double, int seems ok)
doesn't show any number in editField(it's empty), no matter what value double is set to.
upp-17242

Cheers to the uiLook,
in win11 and dark mode - things don't look as win3.11 anymore :)

Not sure what you mean. Pull request for layout? Or maybe .lay file attachment here?

Example for EditNumber?
