---

Windows 10  
MSVC22x64

After working ok for 14 days 17045 now refuses to build anything and outputs the following:

Saving

----- CtrlLib ( GUI MT MSC22X64 DEBUG DEBUG\_FULL MSC WIN32 ) (1 / 23)

There were errors. (0:00.51)

Changing to various MS compilers makes no difference. Ditto selecting different "main packages".

Changing to CLANG results in a build of a test app (I cannot use CLANG for serious development it objects to some MS libraries I use).

Is this a MS compiler problem or an IDE problem?
