Thanks! I've attached my current code. When you run it, if you pull down "Settings" and go to the database setup, you'll see the buttons are the reverse from how they are displayed if you pull down "File" and select exit.

Also, is there a way to change dialog titles? Right now I'm calling the app "Store Manager" but PromptOK() and friends display "StoreManager" (no space) in the title bar.

I appreciate the help!
