Hi sduensin

For some reason there are two application names, one defined in App.cpp (static char sAppName[256]) and other in Ctrl.cpp (String Ctrl::appname). To be sure, I will use both, so I would leave main like this:

```
GUI_APP_MAIN {  
    StoreManager app;  
    app.SetAppName(APP_NAME);  
    SetAppName(APP_NAME);  
    app.Run();  
}
```

In addition I cannot see the problem with the buttons; they appear as they are designed. Look at this picture:
